

Managing the West Country's Water Resources - Challenges & Solutions

Thursday 23 June 2022 - 9:30 AM - 11:30 AM

[REGISTER HERE](#)

This region-wide online workshop is the first in a series of events this summer to introduce the challenges we face for water resources management in the West Country region over the coming years and to begin exploring how we can all work together to design and deliver solutions.

The **Westcountry Water Resources Group (WCWRG)** is currently developing the **West Country Regional Water Resources Management Plan 2024**, which will be published in draft for consultation in October 2022.

Having completed an initial consultation in January 2022, we now want to continue our close collaboration with as many stakeholders as we can. Our aim is to develop a shared understanding of the future water management challenges we face (especially in relation to the environment), explore the different options for water resources management solutions, and build a strong consensus around the plan (for both its design and delivery).

During this process, we want to hear and understand the points-of-view of as many people as possible and help develop a Regional Water Resources Plan that **delivers the best possible value for everyone in the West Country.**

To achieve this, we are going to be holding a series of events (webinars, workshops, focus groups, action planning meetings) over the coming months and we will also be working with local stakeholders to co-develop catchment action plans in five catchments across the West Country Region: the **Tamar**, **East Devon**, the **Poole Harbour Catchment**, the **Dorset Stour** and **Bristol Avon**.

You can register for the 1st regional workshop - [HERE](#)
